
License Admin Operator Guide

EasyReportCreator — issuing and managing 1-year licence keys

Document	ERC-OPS-LIC-001
Product	EasyReportCreator (web)
Audience	TSPD operators / support
Admin URL	https://easyreportcreator.com/admin/
Revision	B — 26 Sep 2026 (light-theme UI screenshots)
Status	Internal use

This guide walks through day-to-day licence work in the License Admin panel: signing in, creating a key by hand, fulfilling a Moneybird purchase, copying the key for the customer, and revoking access when needed. The admin interface uses a light theme (white / pale grey surfaces with teal accents). Screenshots show sample data for illustration only.

Contents

1. Purpose and access
2. Signing in
3. Overview dashboard
4. Issuing a licence manually
5. Fulfilling a Moneybird purchase
6. Finding, copying and revoking keys
7. Customers list
8. What to tell the customer
9. Quick reference

Licence model in short: 7-day trial on register → 1-year key (ERC-XXXX-XXXX-XXXX) → 365 days counted from **activation** in the report app, not from the moment you issue the key.

1. Purpose and access

Use License Admin when you need to create a key, finish a paid checkout, or revoke a key. Customers never use this panel; they activate keys under **Licence** in the report application.

Task	Screen
See totals and pending checkouts	Overview
Create a key by hand	Licenses → New license
Issue a key after Moneybird payment	Purchases (or Overview)
Copy or revoke a key	Licenses
Look up holders	Customers

Admin credentials are stored on the server in `website/inc/config.local.php` (`admin_username`, `admin_password`, `admin_api_key`). Do not put passwords in email or chat.

2. Signing in

1. Open <https://easyreportcreator.com/admin/>
2. Enter your username and password, then click **Sign in**.
3. Alternatively, use *Sign in with master API key instead* if you have the master key (break-glass access).

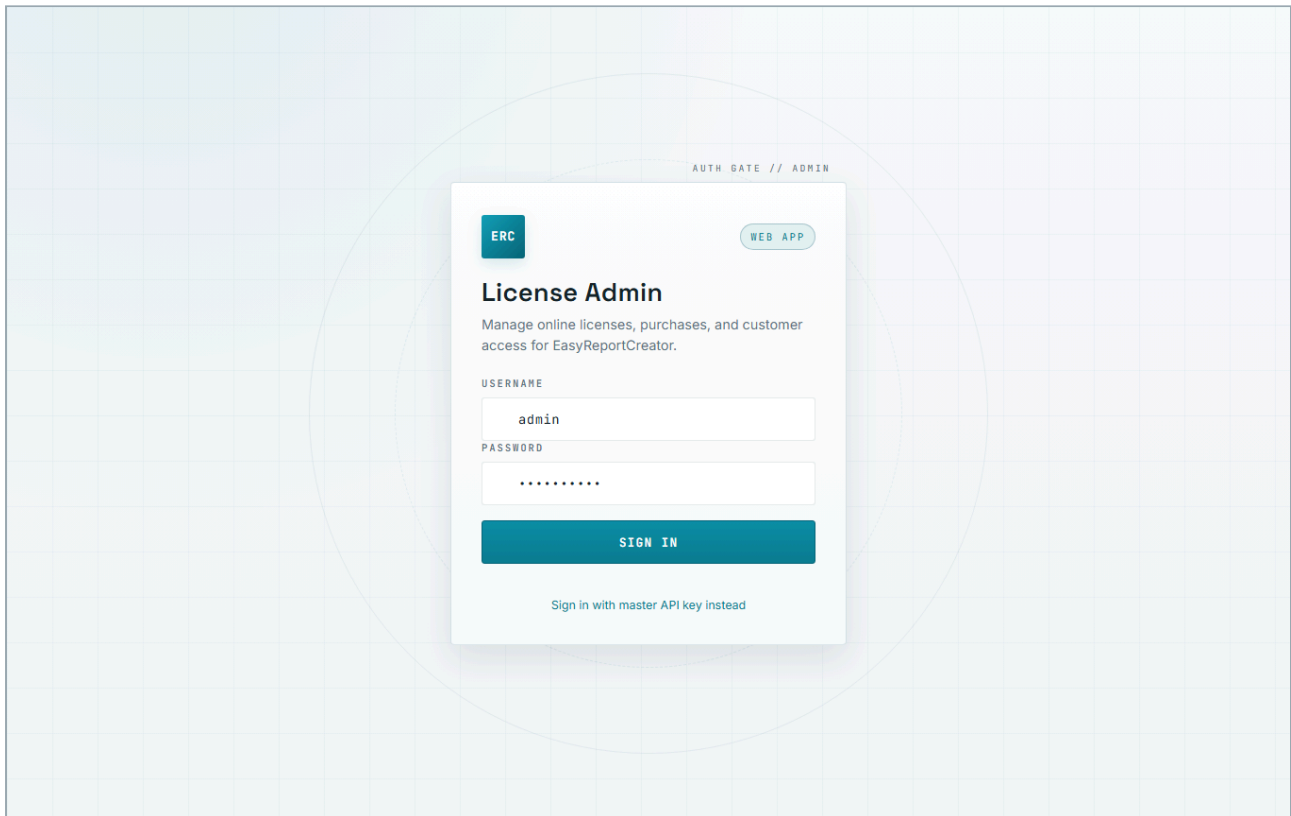

Figure 1. Sign-in screen (light theme). Prefer username/password for daily work; keep the master key for emergencies.

If the dashboard does not appear after a correct login, hard-refresh the page (Ctrl+F5). Session tokens are stored in the browser; signing out clears them.

3. Overview dashboard

After login you land on Overview. The cards show how many keys exist, how many are still available, how many are in use, how many were revoked, and how many purchase checkouts are waiting for a key.

When someone starts checkout on the public Buy page, a row appears under **Purchase checkouts**. After you confirm payment in Moneybird, click **Issue key** on that row (see section 5).

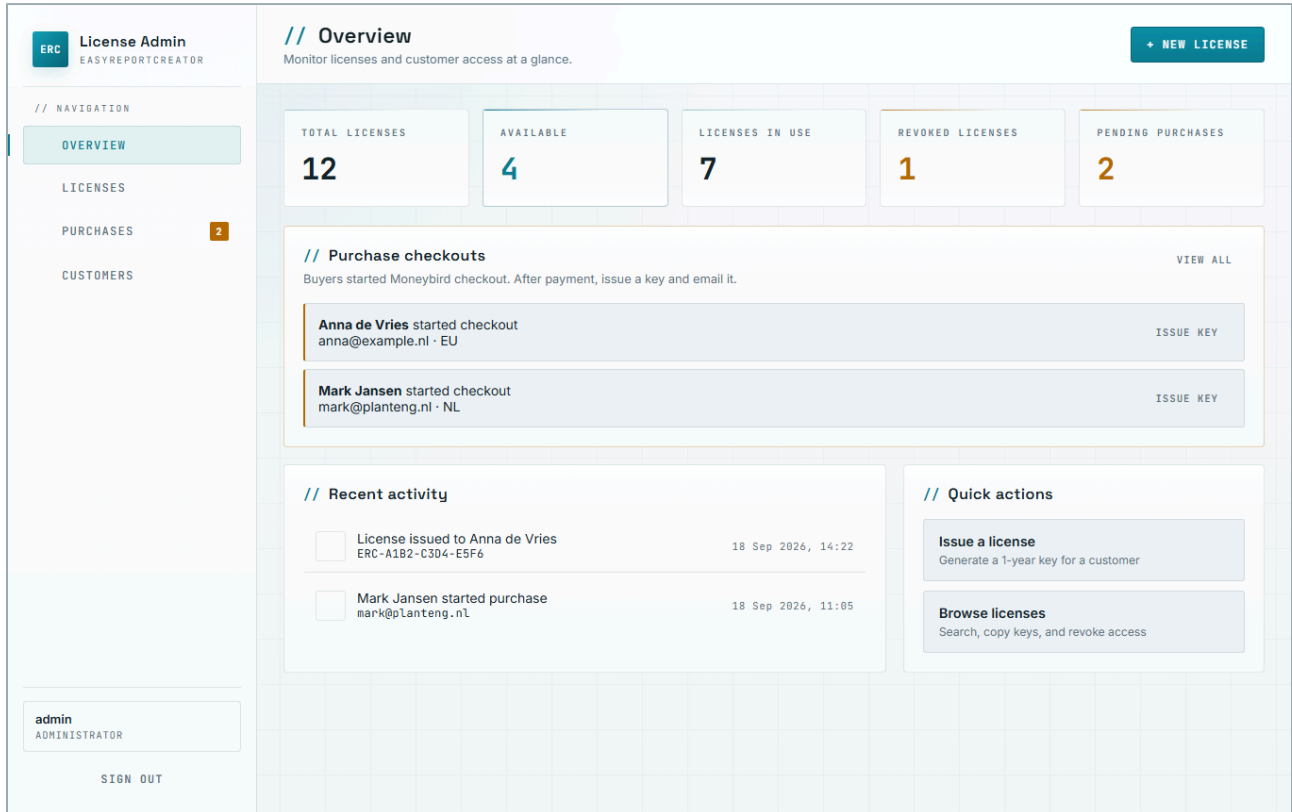

Figure 2. Overview with sample pending purchases. The badge on Purchases in the sidebar mirrors the pending count.

Use **+ New license** in the top right when you need a key that is not tied to a Moneybird intent (invoice paid offline, pilot grant, replacement key).

4. Issuing a licence manually

This is the usual path for support grants and offline payments.

4.1 Open the form

Click **+ New license** (toolbar) or open **Licenses** and start a new key from there. The form asks for customer details and validity.

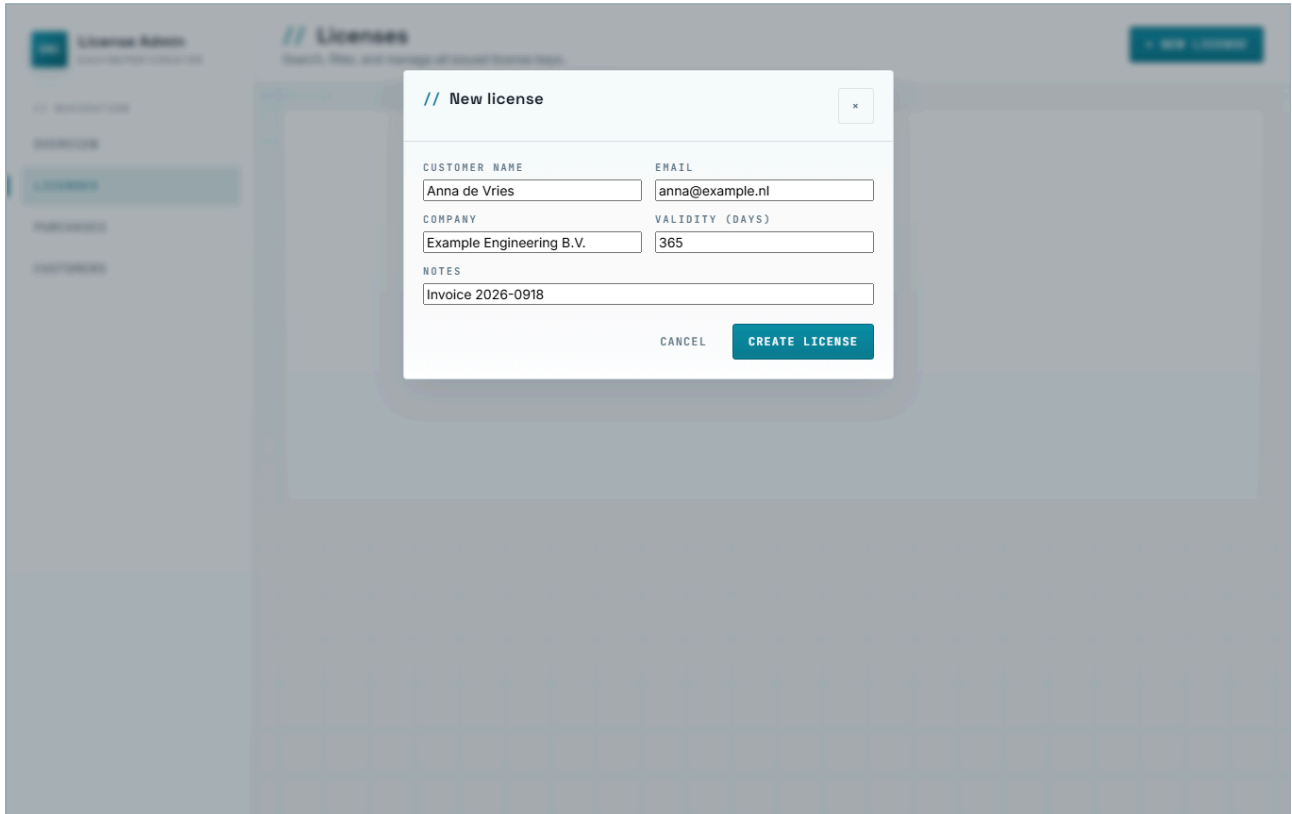

Figure 3. New license dialog. Validity defaults to 365 days. Notes are for your records (invoice number, ticket id, etc.).

4.2 Fill the fields

Field	Guidance
Customer name	Person who will receive the key
Email	Address you will send the key to
Company	Optional; helps later search
Validity (days)	Leave at 365 unless agreed otherwise
Notes	Optional internal reference

4.3 Create and copy

1. Click **Create license**.
2. A short confirmation shows the new key in the form ERC-XXXX-XXXX-XXXX.
3. Open **Licenses**, find the row, and click **Copy**.
4. Send the key to the customer (email or agreed channel).

Figure 4. Licenses list after issue. Status available means the key is not activated yet; in use means a company has activated it.

The year does not start when you press Create. It starts when the customer activates the key on the Licence page in the report app.

5. Fulfilling a Moneybird purchase

When a buyer uses Buy on the public site, the system stores a purchase intent and sends them to Moneybird. After payment is clear on your side:

1. Open **Purchases** (filter **Pending**), or use **Issue key** on Overview.
2. Check name, email, company and VAT region against the payment.
3. Click **Issue key**.

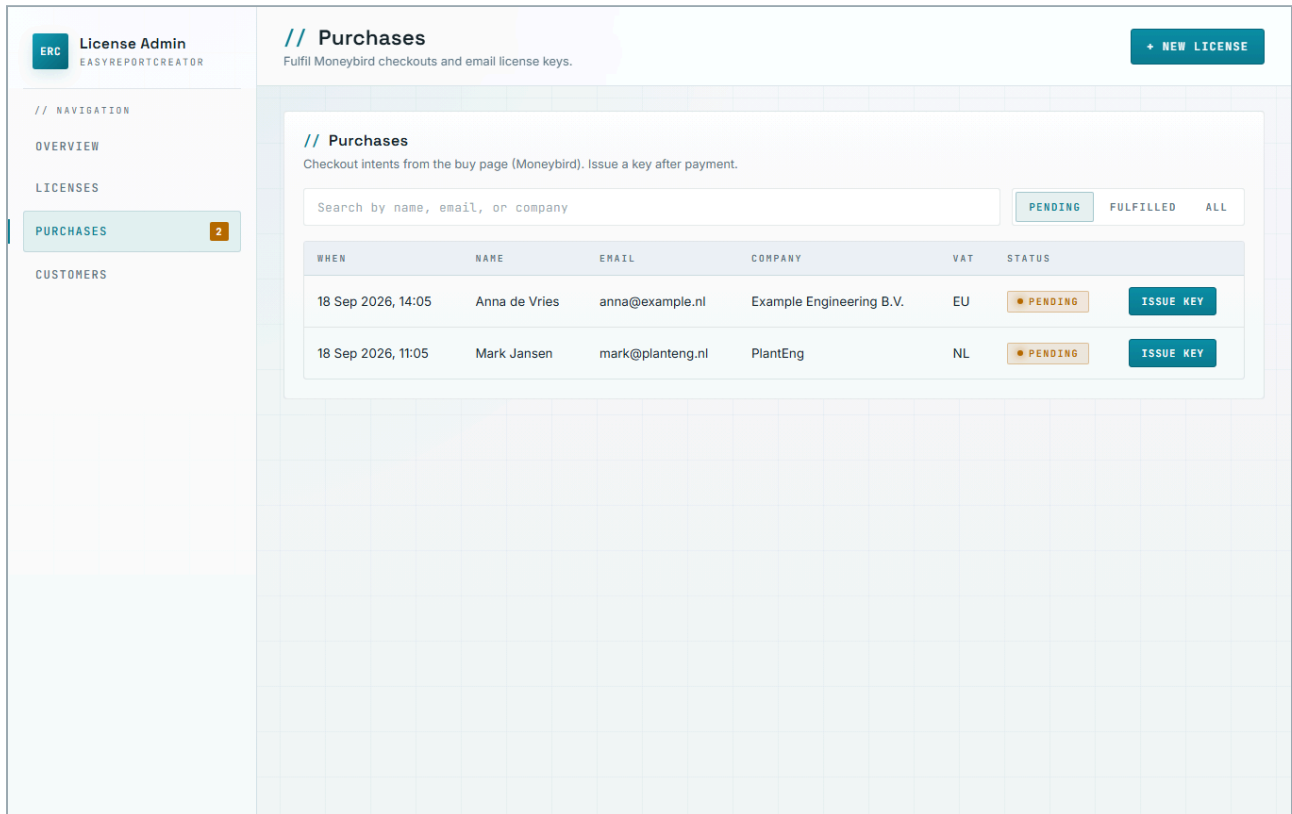

Figure 5. Purchases — pending filter. Issue key creates the licence, marks the intent fulfilled, tries to email the buyer, and copies the key to the clipboard.

If the toast says email could not be sent, paste the key into a normal email. Do not click Issue key twice on the same purchase; the second attempt will fail because the intent is already fulfilled.

6. Finding, copying and revoking keys

On **Licenses** you can search by key, name or email, and filter by status:

Filter	Meaning
All	Every issued key
Available	Issued, not yet activated
In use	Activated on a company account
Revoked	Blocked; cannot be used

Copy puts the key on the clipboard. **Revoke** asks for confirmation, then blocks the key. If it was already active, that company loses access. Revocation is permanent for that key — issue a new one if the customer should regain access.

7. Customers list

Customers is a read-only view built from issued keys. Use it to find contact details before you create a replacement key or chase an unpaid fulfilment.

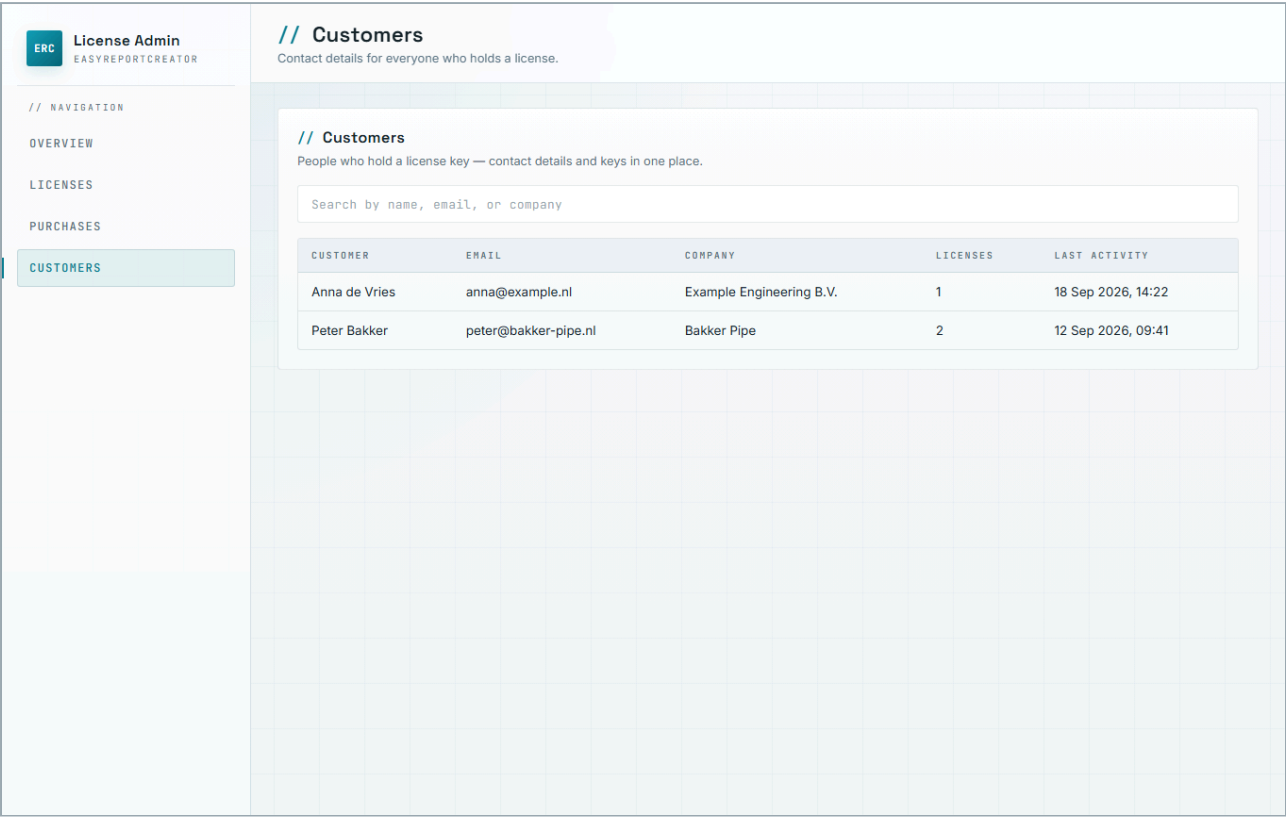

Figure 6. Customers derived from licence records (sample data).

8. What to tell the customer

After you send a key, include something close to the following:

1. Sign in at <https://easyreportcreator.com/report/login.php>
2. Open **Licence**
3. Paste the key and click **Activate 1-year licence**

Remind them that Plant 3D does not need to be running — only their `ProcessPower.dcf` file — and that the 365 days start at activation.

9. Quick reference

Daily checklist

1. Sign in to `/admin/`
2. Check the Purchases badge / pending list
3. After Moneybird payment clears → Issue key
4. Confirm the customer received the email (or send the key yourself)
5. For refunds or abuse → Revoke on Licenses

Common problems

Symptom	What to try
Login fails	Check credentials in <code>server config.local.php</code>
Empty dashboard	Refresh; confirm you are still signed in
“Already fulfilled”	Find the existing key under Licenses by email
Customer says key invalid	Check format, not revoked, not used on another account
Email missing	Copy from Licenses and resend; ask them to check spam

End of ERC-OPS-LIC-001 · Revision B · Prepared for TSPD internal use · Screenshots reflect the light-theme License Admin UI as of Sep 2026 (sample records).
